Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Currently amended) A method for conducting a radiated performance test on a wireless device <u>under controlled test conditions</u>, the method comprising the steps of:
 - establishing an interface from a test computer to said wireless device;
 - establishing a data connection on said interface between said test computer and said wireless device;
 - initializing and starting a timer for a predetermined interval on said wireless device;
 - removing said interface to said wireless device during said predetermined interval;
 - starting a <u>radiated performance</u> test <u>result accumulation</u> script on <u>at said wireless</u> device <u>after said predetermined interval;</u>
 - -removing said-interface during said-predetermined-interval;
 - running-subjecting said wireless device to said radiated performance test after said predetermined interval;
 - storing a log of said radiated performance test results on said wireless device; and
 - analysing said test results based on said log.

- 2. (Original) The method of claim 1, wherein said interface is a data cable.
- 3. (Original) The method of claim 1, wherein said interface is a wireless communications means.
- 4. (Currently amended) The method of claim 1, wherein-[[said]] analysing said test results includes:
 - re-establishing said interface;
 - re-establishing said data connection between said test computer and said wireless device;
 - retrieving said test log from said wireless device to said test computer; and
 - performing an analysis of said test log to provide derived test results.
- 5. (Currently amended) The method of claim 1, wherein-[[said]] analysing <u>said</u> test results includes:
 - performing an analysis of said log on said wireless device to obtain <u>derived</u> test
 results; and
 - displaying said test results on said wireless device.
- 6. (Original) The method of claim 1, wherein said computer includes a software tool for communications between said wireless device and said computer.
- 7. (Original) The method of claim 6, wherein said step of establishing said data connection includes said software tool sending a command to said wireless device.

- 8. (Original) The method of claim 6, wherein said step of starting a test script includes said software tool sending a command to said wireless device.
- 9. (Original) The method of claim 4, wherein said step of initializing a timer includes said software tool sending a command to said wireless device.
- 10. (Original) The method of claim 1, wherein said step of starting a test script further includes loading a test script from said computer to said wireless device.
- 11. (Original) The method of claim 1, wherein said test script pre-exists on said wireless device.
- 12. (Currently amended) A method for conducting a radiated performance test on a wireless device under controlled test conditions, the method comprising the steps of:
 - initializing and starting a timer from said wireless device for a predetermined interval;
 - starting a <u>radiated performance</u> test <u>result accumulation</u> script from said wireless device <u>after said predetermined interval</u>;
 - <u>subjecting said wireless device to running</u>-said radiated performance test after said predetermined interval;
 - storing a log of said radiated performance test results on said wireless device;
 - establishing an interface between said wireless device and a test computer;

- establishing a data connection between said test computer and said wireless device;
- retrieving said test log from said wireless device to said test computer; and
- performing an analysis of said test log to provide derived test results.
- 13. (Original) The method of claim 12, wherein said interface is a data cable.
- 14. (Original) The method of claim 12, wherein said interface is a wireless communications means.
- 15. (Original) The method of claim 12, wherein said computer includes a software tool for communications between said wireless device and said computer.
- 16. (Original) The method of claim 15, wherein said step of establishing said data connection includes said software tool sending a command to said wireless device.
- 17. (Currently amended) A method for conducting a radiated performance test on a wireless device under controlled test conditions, the method comprising the steps of:
 - initializing and starting a timer from said wireless device for a predetermined interval;
 - starting a <u>radiated performance</u> test <u>result accumulation</u> script from said wireless device <u>after said predetermined interval</u>;

- <u>subjecting said wireless device to running</u>-said radiated performance test after said predetermined interval;
- storing a log of said radiated performance test results on said wireless device;
- performing an analysis of said log on said wireless device to obtain <u>derived</u> test
 results; and
- displaying said test results on said wireless device.
